ENGINEERING SERVICES

Our Engineering Department is equipped with Autodesk Inventor with finite element capabilities. This software allows us to design, simulate, and visualize complete products before manufacturing them. This enables us to have complete control throughout the project and makes it easier for us to work together with our customer on design-to-fabrication workflow.

Bethel works with each customer one-on-one to develop custom designs and initial prototypes. Whether it is for a product you already have in production or for research and development. We can help you with all your engineering needs.

MATERIAL HANDLING & CUSTOM EQUIPMENT

Bethel Engineering invests a lot of time and effort assisting each of our customers with their needs, especially when it comes to material handling systems. No matter the industry, let us determine which material handling operations can benefit you. Our material handling systems can give your company a competitive edge. We will work closely with you to determine which operations should be automated and the most cost-effective solution. Each system is custom designed to address our customers' specific requirements.

Whether you need a completely new Material Handling System or want to incorporate into your current system, Bethel can help. We work with our customers to design a system specifically tailored to the existing facility, budget, and time constraints. Our systems range from basic pick and place to fully automated manufacturing lines.

Our team works one-on-one with our customers to coordinate each and every system. We offer complete installation services and so much more. We encourage our customers to be involved from design to start up. For more information on what we have to offer you, contact us.

Conveyor Capabilities:

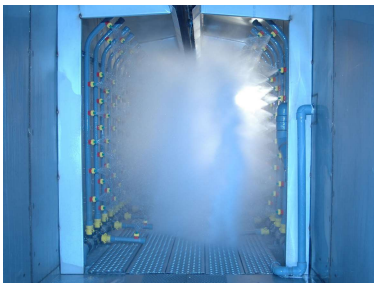

- Skate Conveyors
- Gravity Conveyors
- Drag Chain
- Enclosed Track
- Monorail
- Chains / Trolleys
- Power & Free
- Floor Conveyors

Safety, Storage & Handling:

- Racking
- Shelving
- Hoppers
- Carts
- Work Stations
- Guarding
- Cages

FINISHING SYSTEMS

**ELECTROCOAT SYSTEMS - POWDER COAT SYSTEMS - CONVEYORS
WASHER SYSTEMS - PROCESS OVENS - AUTOMATED DIP SYSTEMS
NEW & RETROFIT WORK - ENVIRONMENTAL ROOMS**

Bethel is a leader in the finishing industry and can provide you with an economically priced, world-class finishing system. We can analyze your coating requirements and make recommendations to best facilitate your company's individual finishing needs. We configure each system to the unique requirements of our individual customers. We make sure each system is designed to meet your needs and install to perform as expected.

We create complex, automated turn-key finishing systems that reach new levels of production efficiency and energy savings. We help maximize productivity while striving to be cost-effective. Bethel also provides upgrades and can retrofit components for existing coating lines.

Our history in the turnkey coating systems business covers everything from a small custom chain on edge units through large monorail systems capable of coating parts weighing over 2000 pounds. Over the years we have fabricated large liquid systems and bulk storage facilities. Our services also include dismantling, moving, and reinstalling existing systems.

Service Systems:

Bethel Engineering "Services what we Build" as well as complete repair service on other coating systems. With our complete fabrication facilities we are capable of re-manufacturing worn or damaged components, oven repair as well as custom rack design.

PRECISION FABRICATION

**CNC LASER CUTTER - CNC PRESS BRAKE - HYDRAULIC SHEAR
MIG WELDING - TIG WELDING - SMAW WELDING (ARC/STICK)**

Bethel uses a wide range of metalworking equipment including laser cutting, machining, forming, shearing, plasma cutting, rolling, welding, and more. Our team of knowledgeable, highly skilled fabricators are experienced in welding a variety of metals. Our material capabilities include, but are not limited to Mild Steel, Stainless Steel, and Aluminum.

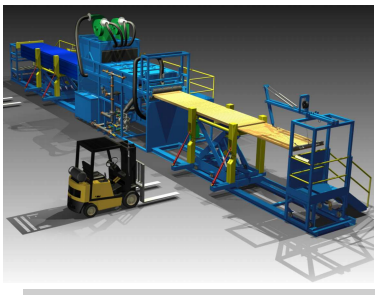

How is Bethel able to provide a complete array of services to such a broad spectrum of businesses? The answer begins with our fully-equipped facility. We have everything on site for complete fabrication and machining capabilities.

Our team works one-on-one with our customers to coordinate each and every system. We offer complete installation services and so much more. We encourage our customers to be involved from design to start up. For more information on what we have to offer you, Contact Us.
